

## 2-LINE I/O SYSTEMS

**Hynautic**

### 2-LINE COMPACT STEERING FOR I/O's

#### 2-Line Systems Featuring The New "Glide Free" 80 Series Helm

Hynautic offers two 2-Line hydraulic steering systems for stern drive applications. They differ in cylinder type and application, and also in the tubing required and the helm unit chosen. Consult the adjacent charts and drawings to make your choice.

I/O 2-Line System Selection Guide

MANUFACTURER	ENGINE TYPE/DESCRIPTION	HYNAUTIC SYSTEM
MERCRAUISER	Single or Twin In-Line Fours to 165 HP	I/O 280-11
	All Power Assist models—single or twin	I/O 280-11
	Single V-6 or V-8 to 210 HP	I/O 280-11
	Single or twin V-6 or V-8 to 500 HP total	I/O 810-11
OMC	Twin Bravo with counter rotation	I/O 810-11
	Single or Twin In-Line Fours to 150 HP	OB 280-11
	All Power Assist models—single or twin	OB 280-11
	Single V-6 or V-8 to 210 HP	OB 280-11
	Single or Twin V-6 or V-8 to 520 HP total	OB 810-11
	King Cobra with counter rotation	OB 810-11
OB 281-11	Old OMC I/O's	OB 282-11
	Can be used to replace Morse system with CRC thru-transom cable	
VOLVO	Single or Twin In-Line Fours, no support tube	OB 280-11
VOLVO	Single or Twin In-Line Fours, support tube	OB 280-11

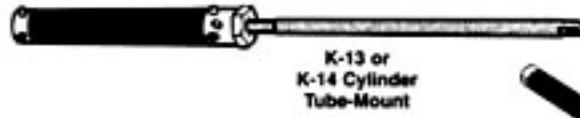

I/O 2-Line Steering System Performance Data

System	Steering Displacement (cu.in.)	Number Steering Cylinders	Wheel Turns	Max. Torque* (in.lbs)
I/O 280-11	2.0	33	1/K-14	4.3
OB 280-11	2.0	33	1/K-13	5.5
OB 281-11	2.0	33	1/K-11	5.5
I/O 810-11	2.0	33	1/K-14	4.3
OB 810-11	2.0	33	1/K-13	5.5
OB 811-11	2.0	33	1/K-11	5.5

NOTE: Cylinder selection between K-13/K-14 and K-11 rests solely on whether or not the guide tube (support tube) used for mechanical steering (usually hooked to the engine) is present or not. K-13/K-14 cylinders use the guide tube and the K-11 is for transom mount.

#### I/O 280 and OB 280 Systems

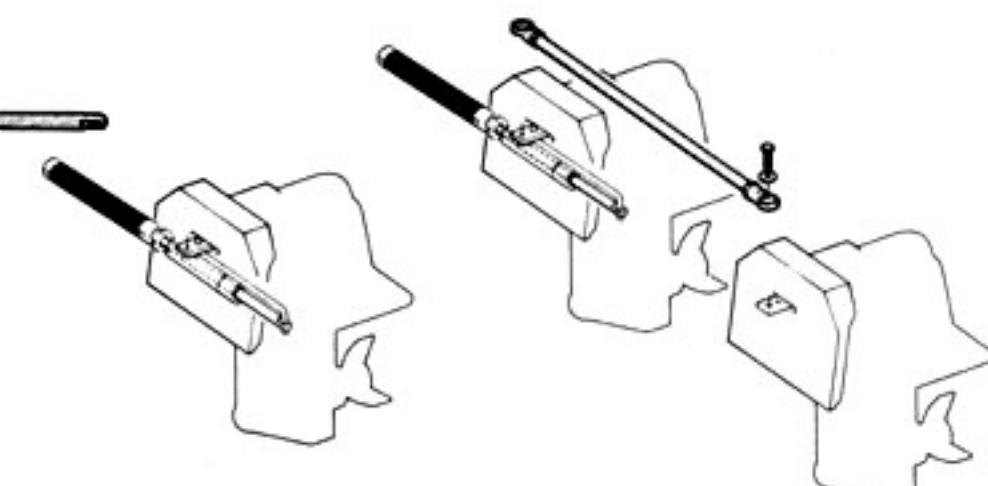

These systems are designed to steer boats with less than 220 HP. Cylinder threads onto guide tube provided by the engine manufacturer. Installation is very simple.

\*Torque @ 60°

#### I/O 810 and OB 810 Systems

The high-pressure versions of the above systems, for total HP above 220. Same features as the low pressure systems. No tubing is provided, must order high-pressure hose separately.

#### OB 281 and OB 811 Systems

The cylinder of this system is mounted to the inside transom and connected to the steering arm of the outdrive. Application is usually restricted to smaller in-line four and six cylinder engines.
